

Introduction to Test Results

SOASTA CloudTest presents test results within the Composition Editor > Play and > Results tabs.

- The Play tab displays current results for the last or actively playing composition. The Play tab also provides buttons for creating dashboards, widgets, and to print the latest result for the test composition.
- The Results tab shows all completed results.

To get started viewing results for an open composition, click Play from the Edit or Play tabs. Once the test begins to play, CloudTest switches to the Play tab for runtime results and once the composition play completes final results are presented in the Results tab.

Results can be selected for comparison by clicking the Toggle Widget Selection Panel button and then using selection in either the Dashboard Data or Widget Data sections to apply to the dashboard or to a selected widget (in the case of the Widget Data section).

Test results can also be opened from the SOASTA Central > Recently Played list or from the Central > Test Compositions list by expanding the arrow for a given test composition in the list.
